BEE BLAST® WASP & HORNET KILLER WITH RESIDUAL

Fast acting, high strength insecticide that instantly saturates insects and their nests with a high output 20' jet blast from our new PowerJet® spray nozzle. Knocks down and kills wasps, hornets, yellow jackets, and bees on contact. Residual action kills wasps and hornets returning to the nest.

Use Around:

- ▲ Warehouses
- ▲ Industrial Plant Grounds
- ▲ Farm Structures & Buildings
- ▲ Bridge & Tower Maintenance
- ▲ Cable & Wire Installation Sites
- ▲ Telecommunications Equipment
- ▲ Outdoor Work Around Electric & Utilities

- ▲ Kills wasps, hornets, yellow jackets, and bees on contact
- ▲ Residual action kills wasps and hornets returning to the nest
- ▲ Dense, accurate spray reaches nests more than 20' above ground
- ▲ Plastic safe — will not damage plastic connectors and other insulating materials
- ▲ High dielectric strength of 47,300 volts
- ▲ Electrically non-conducting; dielectric breakdown voltage of 47,300 volts

The best time to spray the nest is in the early morning or early evening when air temperature is cooler, most insects are in the nest and little activity is observed around the nest opening. Spray only if the air is still. Stand at a safe distance from the nest, not directly under it. Hold container upright at arms length, point the actuator at the nest and spray into the opening of the nest first. Then spray the rest of the nest until it is saturated. Treated insects may fall out of the nest and die. Any insects returning to the nest after treatment will be killed. Wait 48 hours before removing the nest. Foliage of desirable plants that were contacted with spray should be hosed off.
