

Food Zone Silicone Sealants

Food Zone Silicone Sealants are NSF Certified for sealing, bonding, protecting and water-proofing applications in food plants. The chemically stable formulations show little change in physical properties after exposure to moisture and temperature extremes.

| CRC Part # | Container Size | Color | Units per Case |
|------------|-----------------|------------------------|----------------|
| 14082 | 12 oz cartridge | White | 12 |
| 14083 | 12 oz cartridge | Clear | 12 |
| 14087 | 12 oz cartridge | Gray | 12 |
| 14088 | 12 oz cartridge | Aluminum (Metallic) | 12 |

CRC Industries is a worldwide leader in the production of specialty chemicals for maintenance and repair professionals serving industrial, electrical, aviation, automotive and marine markets. CRC is ISO 9001:2008 certified and adheres to the strictest guidelines for quality in all facets of research, development and production.

White – Designed for high moisture, indoor/outdoor applications

Gray – Blends in with tanks and sinks to form a water-tight seal

Aluminum – Blends in with tanks and sinks to form a water-tight seal Metallic color matches stainless steel

Clear – Forms a barely visable, water-tight seal

CR Food Zone Silicone Sealants

Directions

- Clean and dry all surfaces. Remove any oil and grease prior to application. Sealant adheres best to clean, unpainted surfaces.
- For a smooth seal, apply sealant at a 45° angle. *Food Zone Silicone Sealant* in the cartridge must be dispensed using a caulk gun (CRC part #14054). Cut tip of cartridge, screw-on applicator nozzle and cut nozzle to desired bead size.
- If further tooling is required, complete within 5 minutes. Remove excess sealant immediately with a dry paper towel.
- Normally sealant "skins" in 10 minutes, dries to the touch in one hour and fully cures and bonds in 24 hours.
- If gasket is not used in assembly, apply sealant to surface of one part and allow skin to form before assembling parts.
- After sealant is completely cured, excess material can be removed by trimming with a sharp blade. Avoid undercutting the sealant.
- Not recommended for use involving continuous immersion in gasoline or head gasketing operations.

Application

- Fully cured *Food Zone Silicone Sealant* has excellent adhesion to glass, metal, porcelain, ceramic, wood, most plastics and many other non-porous substrates.
- Can be applied to surface temperatures from 0°F to 120°F and, after curing, withstands constant operating temperatures from -70°F to 400°F.
